

Abstract

The invention relates to a protective cover (11) for motor vehicles, motor vehicle components, machines or similar, which matches the external overall structure, 5 or the form of individual components of an object (12) for protection, the edges of which are fixed to the object (12) for protection. Along the at least one edge of the protective cover (11), which corresponds to an edge (22, 25) of a body, a pocket (26) is provided 10 with at least one inlaid, flat strip retaining element (24), which engages the body edge (22, 25) of the object (12) for protection under tension in a fixing position (37).
